

Scientists at Becket have worked hard this year!

Investigations into simple mechanisms, the seasons, categorisation, magnetism, nutrition, teeth (or rotten eggs – eww!), and forces have been undertaken.

Our Scientists have worked alongside specialists from Rolls Royce to explore just what it takes to design, build, and test a rocket-powered car.

Eco-Crew have done a phenomenal job of partnering with the Forest of Avon Trust to plant 100's of saplings in our grounds to increase biodiversity.

Engineering Crew used their knowledge to build a strong, yet fully biodegradable tree – unfortunately they didn't get the chance to test it at the South West Science Challenge, but the design ideas were fantastic and the teamwork was excellent.
